**Munich, November 5, 2026. Tion Renewables GmbH ("Tion Renewables" or "Tion"), a leading European independent power producer (IPP), has completed the repowering of three operational solar PV plants in Italy. Replacing fixed-tilt structures with tracker systems and new modules has increased installed capacity by close to 40%.**

The plants, located in Veneto in northern Italy and Basilicata in southern Italy, have been operating since 2011 and 2012 and are expected to generate around 7 gigawatt-hours (GWh) of green electricity annually after the upgrade. They continue to benefit from feed-in tariffs for the upcoming years, providing contractually secured revenues and stable cashflows, while the new equipment extends their operational life well beyond the tariff period.

The project is part of Tion's value enhancement strategy: Tion systematically creates additional value from assets it already owns through repowering, revamping, asset hybridization and optimized financing structures alongside constant, proactive asset management and commercial enhancements.

Ingmar Helmke, CEO of Tion Renewables: "Buying a renewables asset is just the beginning. We have lifted the output of three long-standing plants by around 40% on the same land and grid connection while preserving the existing tariff. This is value enhancement in practice: getting more

from what we own. My thanks go to our entire Spanish team for running this flagship project so smoothly."

**About Tion Renewables:**

Tion Renewables operates an 887 MW portfolio of renewable energy assets across selected European core markets and is a digitally enabled Independent Power Producer (IPP). Backed by its shareholder EQT Group, the company invests in, builds, operates, and continuously optimizes solar PV and onshore wind projects as well as battery energy storage systems. Through long-term PPAs and guaranteed feed-in tariffs, Tion generates predictable revenues and stable cashflows. Tion builds long-term partnerships with other industry leaders based on agility and trust. Tion has its headquarters in Munich and operates offices in Frankfurt, Madrid and Warsaw.

We empower the energy transition.
